Role playing, voting, variable player powers

Werewolves roam the village! Every night they kill one villager, every day the villagers – among them the werewolves in their human shape – mourn their losses and discuss, who might be the beasts in their midst. If they agree on one of their neighbors the gallows awaits them. Special characters like a healer, a witch, a seeress and a hunter can tip the scale in favor of the villagers – but they can also fall victim to either the villagers' paranoia or the werewolves' claws. Night after day after night the madness continues until either all Werewolves were lynched or all villagers died.

Werewolves is a well-known, interactive game of deception and deduction. Since each game is led by a neutral moderator, even newcomers can join right in and experience thrilling moments day after night after day.
